

## ThreeBond 1539

*Single Component Low Temperature Fast Curing Elastic Adhesive*

### Product Information

ThreeBond 1539 is a one-part low temperature fast curing elastic adhesive. Its main component is a plant derived polymer. The cured material is an elastic body which is resistant to vibration and impact, excellent for quick cure of heat sensitive electronics and components.

**Rapid cure with low heat (1 min at 60°C)**

### Applications

Potting of electronics

Bonding of electrical components

Sealing enclosures for self driving modules, ECU, sensors etc.

Vibration dampening

### Features

One-part, fast cure

Excellent water and moisture resistance

Maintains elasticity in wide temperature range

Environmentally friendly plant based formulation

Excellent for bonding engineered plastics
